DERATING CURVE

DERATING CURVE (CONTINUED)

CMD vs Output Curve

VCI vs OVP Curve

To ensure the power supply output voltage and current could be accurately adjusted, please make sure to adjust the output voltage and current > 10% vs. the rated voltage and current. (e.g. for a 24 V unit, please adjust the DC output voltage above 2.4 V to ensure accuracy; same applies to the output current)

External Voltage (VDC)

External Resistor (KΩ)

DERATING CURVE (CONTINUED)

Power OK Signal & Auxiliary Power Setting

The grounding of "AUX" power and P. OK signal should be connected to "GND" port. If "VO-" is connected as Grounding, make sure to short the GND and VO- ports.

Open drain signal low when PSU turns on. Max. P. OK sink current: 20 mA, Max, drain voltage: 40 V.

Place an additional capacitor to have a better performance of auxiliary power operation.

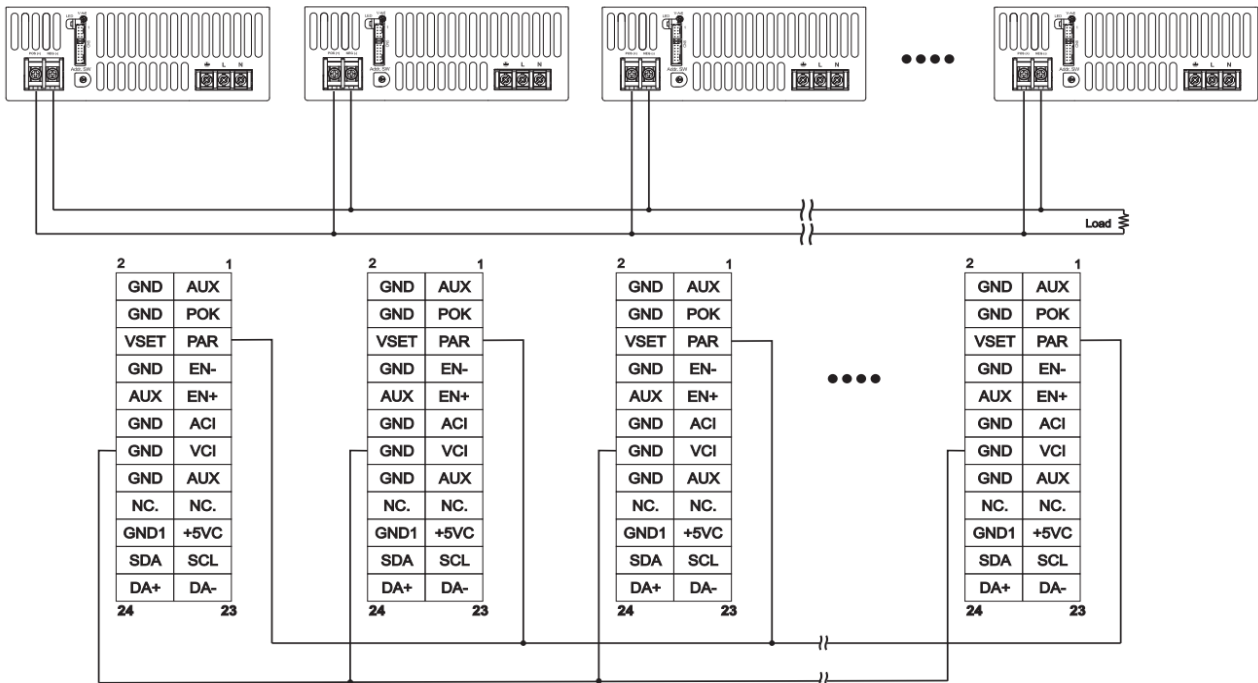

Note:
GND shown in above diagram is referring to the GND of CN2, not the Grounding from main power (NEG-).

RS485 Communication Connection Diagram

Note:
Make sure GND1 (pin 20) is connected to the external communication kit when using RS485 / I²C.

CURRENT SHARING

Remarks:

- AEK-3000-HV Oring diode has the built-in active current sharing function to support max. of 8pcs connected in parallel condition to support higher output power. When performing parallel connection, make sure to note the followings:
 - Please connect PAR pins together for current sharing function.
 - Among the parallel connection units, output voltage difference of each PSU should be <math><0.2\text{ VDC}</math> (This can be set via V-adj from the PSU front panel VR).
 - Total output current must not exceed 90% of the rated power in parallel condition. Maximum output current at parallel condition = rated current per unit x number of unit x 0.9.
 - To ensure current share balance, output current of each unit must be >10% vs. the rated output current.
- For Series connection, please find some of the remarks as follow:
 - Max. units for series connection is 2pcs.
 - Total output current must not exceed 90% of the rated power in series condition. Maximum output current at series condition = rated current per unit x 0.9
 - Make sure to isolate all the signals from CN5, except I²C/RS485, Pin 19, 20 and +5VC

MOUNTING INSTRUCTIONS

Recommended Standard Mounting Configurations:

Notes:

1. Recommended screw length is measured from the power supply surface.
2. Ventilating holes on the front and back side panels should not be obstructed. Allow min. 50 mm space for air flow. See below.
3. Recommended torque of M4 mounting screws is 1.27 N · m (13.0 kgf · cm).
