## Rack-scale Big Data Workloads & Storage

One of the highest performance big data processing and scale-out storage appliances uses Artesyn’s DS1600SPE server power supply as a redundant power conversion solution. The appliance offers massive improvements in space usage and power consumption versus equivalent performance using a traditional rackmount server approach, assisted by the high efficiency and high power density of the

Artesyn DS short series unit. The developer of this innovative appliance has customers in markets as diverse as insurance, genetic research and motor racing taking advantage of the awesome power to disrupt their industries. In the case of medical research, this hardware is helping to massively slash the time it takes to conduct potentially life-saving research.
