LED Lighting

LEDs are replacing other lighting technologies in almost all applications from automotive to street lighting, horticultural to retail, and residential to industrial. A maker of innovative LED lights for industrial applications has selected Artesyn's LCC600 series fanless and IP65-rated AC-DC power supply for its new ruggedized high power luminaire, which uses a patented cooling method to optimise efficiency of the light fixture. Starting with a power supply that already meets the EN61347-2-13 lighting industry standard and ENEC high quality European mark made it much easier for the customer to secure safety approval for their lighting fixture. Artesyn's ability to rapidly modify the standard product to suit the customers exact needs, including constant current mode and a small output voltage adjustment, combined with outstanding technical support made this bright idea an easy decision for this customer.
